

## **How Hospitals** Can Reduce **Sepsis Mortality** by Up to

Timely sepsis intervention is critical – in one study, a one-hour decrease in response time reduced mortality by 35% for patients with septic shock.1 Faster response times and team collaboration lead to improved initial bundle compliance, which decreases costs by \$7,159 per patient.<sup>2</sup>

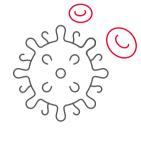

See how hospitals using TigerConnect for sepsis response workflows have been able to reduce sepsis mortality by 30-40%.
